1. Product Overview :

SK6805-EC20 is an embedded control LED light source, which includes intelligent digital, digital interface, data latching, signal shaping and amplifying driver, power supply voltage stabilizing circuit, built-in constant current circuit, high precision RC oscillator, the output drive uses the patent PWM technology, effectively guarantees the pixel point inside the light color high consistency. The data protocol adopts the communication method of Unipolar Return Code. After the Pixel is reset on the power, the DIN terminal receives the data transmitted from the controller. The first 24 bit data sent is extracted by the first pixel and sent to the Pixel, the rest of the data is amplified by the internal shaping, then the data is rotated through the DO port, and the output is sent to the next cascaded pixels, and the signal is reduced by 24bit for each pixel. Pixel, the use of automatic shaping forwarding technology, so that the number of the Pixel cascade is limited by the signal transmission, only limited by the signal, the transmission speed requirements.

2. Main features

- Easy To Design
- Easy To Build
- Easy To Program

3. Description:

- Chip SMD internal integrated high quality external control line serial cascade constant current IC;
- control circuit and the RGB chip in EC2020 components, to form a complete control of pixel, color mixing uniformity and consistency;
- built-in data shaping circuit, a pixel signal is received after wave shaping and output waveform distortion will not guarantee a line;
- The built-in power on reset and reset circuit, the power does not work;
- gray level adjusting circuit (256 level gray scale adjustable);
- red drive special treatment, color balance;
- line data transmission;
- plastic forward strengthening technology, the transmission distance between two points over 10M;
- Using a typical data transmission frequency of 800 Kbps, when the refresh rate of 30 frames per sec

4. Mechanical Dimensions:

Notes:

1. All dimensions are in millimeters.
2. Tolerance is ± 0.1 mm unless otherwise noted

5. PIN configuration

NO.	Symbol	Function description
1	VDD	Power supply LED
2	DOUT	Control data signal output
3	GND	Ground
4	DIN	Control data signal input

6. Recommended dimensions for PCB

7. General description of product naming

	Tf	---	100	---	ns	

Note 4、Note 5、Note 6 : As shown in the figure below

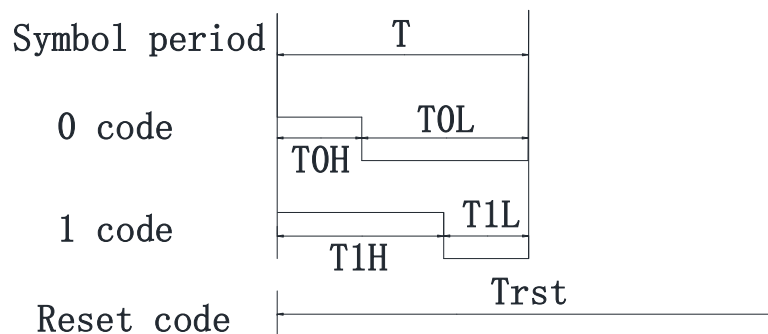

12. The data transmission time :

Name		Min.	Standard value	Max.	Unit
T	Code period	1.20	--	--	μs
T0H	0 code, high level time	0.2	0.32	0.4	μs
T0L	0 code, low level time	0.8	--	--	μs
T1H	1 code, high level time	0.58	0.64	1.0	μs
T1L	1 code, low level time	0.2	--	--	μs
Trst	Reset code, low level time	>80	--	--	μs

1. The protocol uses a unipolar zeroing code. Each symbol must have a low level. Each symbol in this protocol starts with a high level. The high time width determines the "0" or "1" code. .
2. When writing programs, the minimum symbol period is 1.2μs.
3. The high time of "0" code and "1" code should be in accordance with the stipulated range in the above table. The low time requirement of "0" code and "1" code is less than 20μs.

13. Timing waveform:

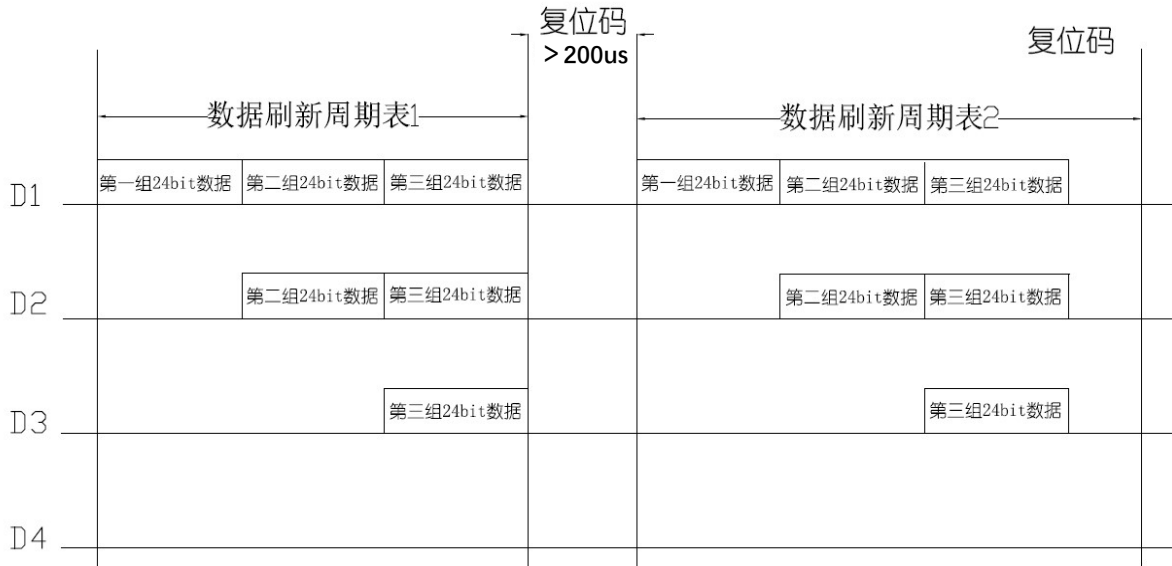

Input code:

Connection mode:

14. The method of data transmission:

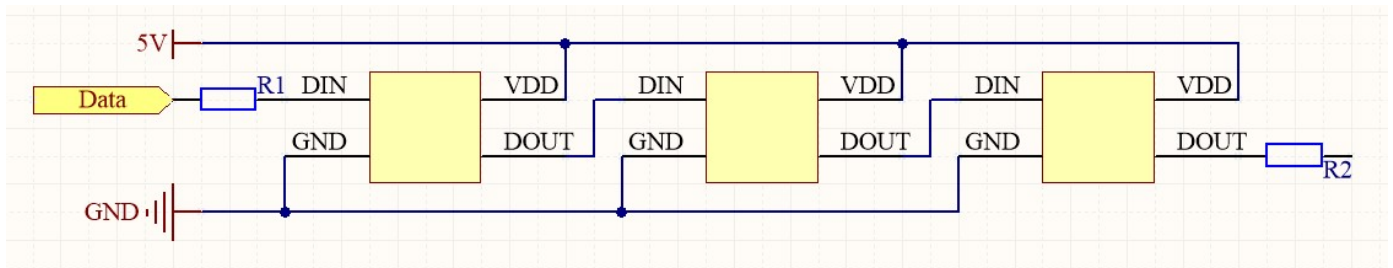

15. The data structure of 24bit:

Note: high starting, in order to send data (G7 - G6 - B0)

16. The typical application circuit:

In the practical application circuit, the signal input and output pins of the IC signal input and output pins should be connected to the signal input and output terminals. In addition, in order to make the IC chip is more stable, even the capacitance between beads is essential back;

Application: used for soft lamp strip or hard light, lamp beads transmission distance is short, suggested in signal in time the clock line input and output end of each connected in series protection resistors, R1=R2 of about 500 ohms.

Application: for module or general special-shaped products, lamp beads transmission distance is long, because of different wire and transmission distance, in the signal in time clock at both ends of the line on grounding protection resistance will be slightly different; to the actual use of fixed;

17. Standard LED Performance Graph:

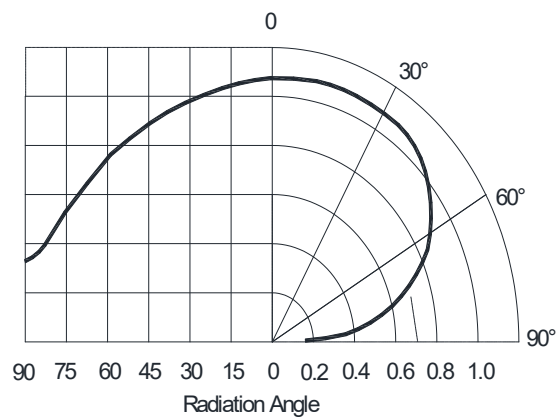

Thermal Pad Temperature vs. Relative Light Output

Wavelength Characteristics

Typical Radiation Pattern 160°

18. Packaging Standard:

SK6805-EC20

The reel pack is applied in SMD LED. The LEDs are packed in cardboard boxes after packaging in normal or anti-electrostatic bags. cardboard boxes will be used to protect the LEDs from mechanical shocks during transportation. The boxes are not water resistant and therefore must be kept away from water and moisture.
