1. Product Overview :

SK6805-EC4004-000 is an embedded control LED light source, which includes intelligent digital, digital interface, data latching, signal shaping and amplifying driver, power supply voltage stabilizing circuit, built-in constant current circuit, high precision RC oscillator, the output drive uses the patent PWM technology, effectively guarantees the pixel point inside the light color high consistency. The data protocol adopts the communication method of Unipolar Return Code. After the Pixel is reset on the power, the DIN terminal receives the data transmitted from the controller. The first 24 bit data sent is extracted by the first pixel and sent to the Pixel, the rest of the data is amplified by the internal shaping, then the data is rotated through the DO port, and the output is sent to the next cascaded pixels, and the signal is reduced by 24bit for each pixel. Pixel, the use of automatic shaping forwarding technology, so that the number of the Pixel cascade is limited by the signal transmission, only limited by the signal, the transmission speed requirements.

1. The protocol uses a unipolar zeroing code. Each symbol must have a low level. Each symbol in this protocol starts with a high level. The high time width determines the "0" or "1" code. .
2. When writing programs, the minimum symbol period is 1.2μs.
3. The high time of "0" code and "1" code should be in accordance with the stipulated range in the above table. The low time requirement of "0" code and "1" code is less than 20μs.

Note: high starting, in order to send data (G7 - G6 -B0)

16. The typical application circuit:

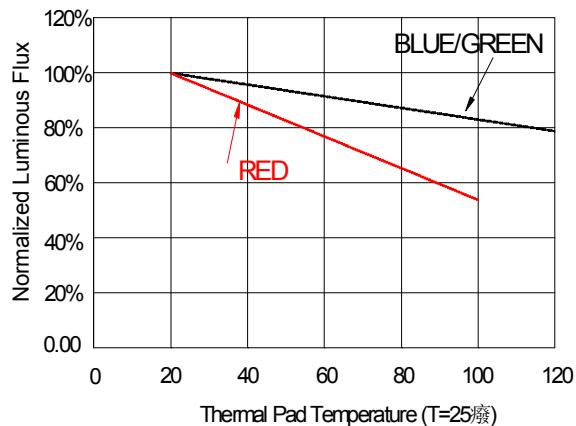

In the practical application circuit, the signal input and output pins of the IC signal input and output pins should be connected to the signal input and output terminals. In addition, in order to make the IC chip more stable, even the capacitance between beads is essential back;

Application: used for soft lamp strip or hard light, lamp beads transmission distance is short, suggested in signal in time the clock line input and output end of each connected in series protection resistors, R1 of about 500 ohms.

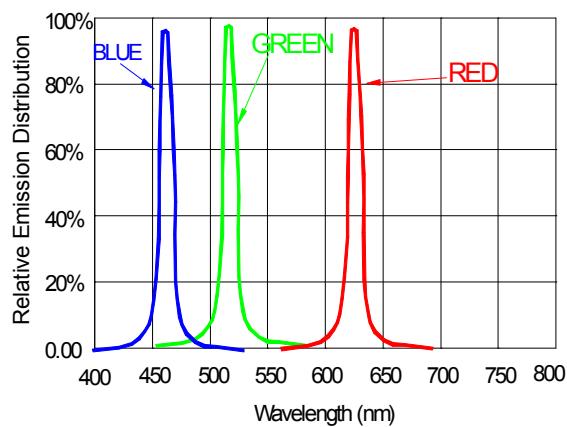

Application: for module or general special-shaped products, lamp beads transmission distance is long, because of different wire and transmission distance, in the signal in time clock at both ends of the line on grounding protection resistance will be slightly different; to the actual use of fixed;

18. Packaging Standard:

The reel pack is applied in SMD LED. The LEDs are packed in cardboard boxes after packaging in normal or anti-electrostatic bags. cardboard boxes will be used to protect the LEDs from mechanical shocks during transportation. The boxes are not water resistant and therefore must be kept away from water and moisture.
